

O Carregador 'Wolfite' C-251HV/C-251LV Instruções de Utilização e Manutenção

De Wolfite-oplader C-251HV/C-251LV Bedienings- en onderhoudsvoorschriften

O acumulador é carregado dentro da lanterna. Há indicadores que mostram se o acumulador está ou não carregado. A luz vermelha apenas indica que a lâmpada não fez contacto. A lâmpada deve ser encalhada com firmeza até se fixar na posição correcta. A luz verde dá indicação da rede de alimentação. Verde e Vermelha dão indicação de que o acumulador está completamente carregado. (Podrá verificar que os indicadores piscam entre o carregamento completo e o principal).

Pode ligar (ON) a lanterna H-251A enquanto estiver a carregar a lâmpada não acenderá mas está preparada para o modo 'standby' em caso de corte de energia e acender-se-á automaticamente se houver um corte de energia no acumulador.

Carregadores de Lâmpadas

Existem dois tipos de Carregadores para lanternas de mão – DE ALTA VOLTAGEM e BAIXA VOLTAGEM para aplicações fixas ou móveis. Os carregadores têm a marcação 'CE' em conformidade com as Directivas de Baixa Voltagem e EMC, e Directiva Automóvel, equipamento para uso em veículos de emergência.

O Carregador 'Wolfite' C-251HV funciona com um nível de tensão de 200-240 volts a 50-60 Hz (Voltagens 'offshore' de 254 volts a 60 Hz), podendo ser alterado pelo utilizador para 100-120 volts a 50-60 Hz. Se não selecionar a voltagem correcta poderá danificar o carregador. O Carregador fica 90% carregado em 6/7 horas. Utilize apenas o fusível recomendado pelo fabricante. Os carregadores estão equipados com fichas aprovadas. Obtenha mais informações nas descrições de vendas.

O Carregador 'Wolfite' C-251LV é adequado para utilização de baterias de 12 a 32 volts. Para que um carregador fique completamente carregado por uma bateria de 12 volts demorará cerca de 20/24 horas, e cerca de 10/12 horas para uma bateria de 24 volts. O cabo eléctrico é composto por dois fios: um vermelho - positivo; e um vermelho e preto - negativo.

Carregamento contínuo em standby por longos períodos de tempo

Se a lanterna for carregada de modo contínuo, deverá fazer-se uma inspecção 'pormenorizada' de 12 em 12 meses, de acordo com a norma IEC 60079-17. Tenha particular atenção a indícios de corrosão nos terminais e consequentes gotas de óleo que podem aparecer a aparecer depois de 3 a 5 anos de carregamento em standby. Se estes indícios se verificarem, substitua a bateria de acordo com estas instruções. O hábito de trocar o carregador pode prolongar a vida da bateria até 10 anos. Sugere-se que siga o seguinte ciclo: 2 semanas ligado (ON), 2-3 meses desligado (OFF); etc. A descarga que ocorre durante o período de 2-3 meses em que está desligado (OFF) não é significativa.

Ambos os carregadores são completamente automáticos: depois do carregamento principal estar completo, passará a fazer um carregamento gradual seguro.

Um carregador completamente descarregado deverá ser imediatamente carregado para evitar danos: Os contactos do carregador têm 'output' de baixa voltagem e proteção de curto circuito; Bateria de 4 volts 5 amp/hora selada do tipo chumbo-ácido; Ambiente de funcionamento do carregador +10°C a +25°C, IP20 - Apenas para uso em interiores.

AVISO: OS CARREGADORES 'WOLFITE' FORAM CONCEBIDOS PARA CARREGAR APENAS LANTERNAS 'WOLF' – NÃO DEVERÃO SER UTILIZADAS OUTRAS BATERIAS OU APARELHOS COM FUNCIONAMENTO A PILHAS.

Faça o carregamento apenas em zonas bem ventiladas. O carregador não deverá ter qualquer obstrução ou ser coberto. O carregador pode ficar posicionado sem qualquer suporte ou colocado na parede usando os quatro orifícios para esse efeito. O cabo de alimentação só pode ser substituído por um agente/distribuidor autorizado.

O carregador não deve ser utilizado por pessoas (incluindo crianças) com capacidades físicas, sensoriais ou mentais reduzidas, ou pessoas com falta de experiência e conhecimento. Evite que estas pessoas tenham acesso ao carregador.

O produto tem a marca CE estando em conformidade com todas as directivas específicas da CE.

C-251HV: **CE** 2006/95/EC **CE** 2004/108/EC

C-251LV: **CE** 2004/108/EC **CE** 2006/28/EC

Wolfite Handlamp Charger C-251HV/C-251LV Operation and Maintenance Instructions

GB

The battery is charged **within the handlamp body**. Indicators show the state of charge of the battery. Red only indicates the handlamp has not made contact; the handlamp must be pushed firmly until latched in position. Green indicates main charge. Green and Red indicates fully charged. (Flashing of indicators may be observed between main and full charge).

The Handlamp can be switched 'ON' when charging, the handlamp will not illuminate, but is set for standby power failure mode and will automatically illuminate should power to the charger be cut.

Handlamp Chargers

Two types of Handlamp Chargers are available - HIGH VOLTAGE and LOW VOLTAGE, to suit fixed or mobile applications. The chargers are 'CE' marked as compliant with the Low Voltage and EMC Directives, and Automotive Directive, equipment for use in emergency vehicles.

Wolfite Charger C-251HV is for mains AC input voltages of 200-240 volts at 50-60 Hz (Offshore platform voltages of 254 volts at 60 Hz), user switchable to 100-120 volts at 50-60 Hz. Failure to select the correct voltage may cause damage. Charger achieves 90% recharge in 6/7 hours. Only fit manufacturer's specified fuse. Chargers are fitted with approved plugs, refer to sales literature for details.

Wolfite Charger C-251LV is suitable for use from DC supplies of 12 to 32 volts. A full recharge from a 12 volt supply takes 20/24 hours, from a 24 volt supply full charge is achieved in 10/12 hours. The two-core flex is red: positive and red with black tracer negative.

Standby continuous long-term charging

On continuous charge a 'detailed' inspection of the handlamp should be carried out every 12 months, in accordance with IEC 60079-17. Particular attention should be given to evidence of terminal corrosion and resultant acid droplets that might begin to occur after 3-5 years on standby charge. If such evidence occurs, the battery should be replaced in accordance with these instructions. A regime of charger switching may extend battery life to up to 10 years, the cycle suggested is: 2 weeks ON, 2-3 months OFF, etc. Self discharge over the 2-3 months 'OFF' period will not be significant.

Both chargers are fully automatic, stepping to a safe trickle charge after the main charge is completed.

A fully discharged battery must be charged immediately to avoid damage; the charger contacts are of low voltage output and short circuit protected; The Battery is Sealed Lead Acid 4 volt 5 amp hour;

Charger operating ambient +10°C to +25°C, IP20 - Indoor use only.

WARNING: THE WOLFITE CHARGERS ARE DESIGNED FOR CHARGING WOLF HANDLAMPS ONLY - NO OTHER BATTERIES OR BATTERY OPERATED DEVICES ARE TO BE USED.

Only charge in well ventilated area. Do not obstruct or cover charger. Charger can be used free standing or wall mounted using four mounting holes provided. The supply cord can only be replaced by authorised agent/distributor.

The charger is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge. The above person should be prevented from tampering with the charger.

The product is CE marked showing compliance with all relevant EC directives.

C-251HV: 2006/95/EC 2004/108/EC

C-251LV: 2004/108/EC 2006/28/EC

The Wolf Safety Lamp Co. Ltd has a policy of continuous product improvement. Changes in design details may be made without prior notice.

Φορτιστής C-251HV/C-251LV της Wolfite Οδηγίες λειτουργίας και συντήρησης

GR

Οι φωτιστές δένονται την κατάσταση φόρτισης της μπαταρίας. Το κοκκίνιο υποδεικνύει ότι η λάμπα δεν έχει επιφέρει. Θα πρέπει να στρέψετε τη λάμπα σταθερά έως ότου ασφαλίσει στη θέση της. Το πράσινο υποδεικνύει κεντρική φόρτιση. Το πάνω και κόκκινο υποδεικνύουν πλήρη φόρτιση. Μπορεί να παραπομπή αναλαμπή των φωτιστών γεννήσεων μεταξύ κεντρικής και πλήρους φόρτισης.

Το χειροφόρτιστο πρέπει να φρεγοποιηθεί όταν φορτίζεται. Η λάμπα δεν θα φωτίζει, αλλά ρυθμίζεται στη θέση αναμονής απόποικος ισχύος και θα φωτίσει αυτόματα αν διακοπεί η προσχούσα στο φορτιστή.

Φορτιστής λάμπας

Διατίθενται δύο τύποι φορτιστών για λιγνίκες χειρός - ΥΨΗΛΗΣ ΤΑΣΗΣ και ΧΑΜΗΛΗΣ ΤΑΣΗΣ, για σταθερές ή κινητές εφαρμογές. Οι φορτιστές δέρουν τη σημαντική ζήτηση που υποβάλλεται στην αποθήκευση της μπαταρίας κάτιας και ηλεκτρομαγνητικής συμβάστησης και προς την οδηγία περί αυτοκίνητων οχημάτων για εξόπλιση για χρήση σε οχημάτων.

Ο φορτιστής C-251HV Wolfite είναι για την κεντρική προφορά εναλλασσόμενος ρεύματος με τάση 200-240 Volt στα 50-60 Hz (εξωτερικές πλατφόρμες τάσεων των 254 Volt στα 60 Hz), τον οποίο στη σημερινή περίοδο θα αλλάξει στα 100-120 Volt στα 50-60 Hz. Αν δεν επιλέγεται τη σωστή περιοχή, μπορεί να προκληθεί ζημιά. Ο φορτιστής πετυχαίνει 90% επαναφόρτωση σε 6-7 ώρες. Τοποθετείται μόνο την ειδική ασφάλεια του κατασκευαστή. Οι φορτιστές είναι εξοπλισμένοι με εγκεκριμένους υποδοχείς. Για πληροφορίες, ανατρέψτε στη βιβλιογραφία πινακίδων.

Ο φορτιστής C-251LV Wolfite είναι κατάλληλος για χρήση από ηλεκτρική προφορά συνεχούς ρεύματος με τάση 12 έως 32 Volt. Μια πλήρης επαναφόρτωση από ηλεκτρική προφορά 12 Volt διάρκεια 20-24 ώρες, ενώ από την ηλεκτρική προφορά 24 Volt διάρκεια 10-12 ώρες. Το καλύπτο δύο πτυρώματα είναι κόκκινος: θετικό και κόκκινο με μαύρη αντίστοιχη αρνητική.

Συνεχής μακροπρόθεσμη φόρτιση σε κατάσταση αναμονής. Σε περίπτωση συνεχής φόρτισης πρέπει να μίνεται λεπτομερής επιθεώρηση του χειροφόρτου κάθε 12 μήνες, σύμφωνα με το πρότυπο IEC 60079-17. Θα πρέπει να προτείνεται η ενδεχόμενη διάρροψης των ακροδιέκτων που θα προκαλέσει διάρροη σταγονώδων οξεών. Αυτό ενδέχεται να προκαλεί υπέρτατη από την προτίτιτη υγρασία την μπαταρία ακολουθώντας τις συγκεκριμένες οδηγίες. Μπορείτε να παρατηθεί τη διάρκεια ζωής της μπαταρίας σε έως και 10 χρόνια, αλλάζοντας την κατάσταση λειτουργίας του φορτιστή ως εξής:

2 εδρούμενες σε λειτουργία (ON), 2-3 μήνες εκτός λειτουργίας (OFF) κ.λπ. Κατά την περίοδο των 2-3 μηνών εκτός λειτουργίας (OFF) δεν θα υπάρξει σημαντική αποφόρτιση.

Και οι δύο φορτιστές είναι τελείως αυτόματοι και μεταβάνουν σε μια ασφαλή βραδεία φόρτιση μόνις ολοκλήρωση η φόρτιση από την κεντρική ηλεκτρική προφορά.

Μια τελείως αριστούμενη μπαταρία θα πρέπει να φορτιστεί για αποφευχθεί τη πρόκληση ζημιάς. Οι επαφές του φορτιστή έχουν έξοδο χαρτί τάσης και προστατεύονται από τη βραχιοκλώμωση.

Ο φορτιστής πρέπει να λειτουργεί σε θερμοκρασία τεριβάλλοντος από +10°C έως +25°C, IP20 - και για χρήση μόνο σε εσωτερικούς χώρους.

Η μπαταρία είναι μια σφραγισμένη μπαταρία μολύβδου οξείας 4V 5 αμερωρών.

ΠΡΟΕΙΔΟΠΟΙΗΣΗ: ΟΙ ΦΟΡΤΙΣΤΕΣ WOLFITE ΕΙΝΑΙ ΣΧΕΔΙΑΣΜΕΝΟΙ ΜΟΝΟ ΓΙΑ ΤΗ ΦΟΡΤΙΣΗ ΧΕΙΡΟΦΑΝΑΡΩΝ WOLF - ΔΕΝ ΠΡΕΠΕΙ ΝΑ ΧΡΗΣΙΜΟΠΟΙΗΘΕΙ ΚΑΜΙΑ ΆΛλΑ ΜΠΑΤΑΡΙΑ Η ΣΥΣΚΕΥΗ ΠΟΥ ΛΕΙΤΟΥΡΓΕΙ ΜΕ ΜΠΑΤΑΡΙΕΣ.

Η φορτιστής πρέπει να λειτουργεί για χρήση από άτομα (συμπεριλαμβανομένων των παιδιών) με μειωμένες αισιοδοσίες, αισθητηρικές, ή νοητικές ικανότητες ή χωρίς περιά και γνωστικές. Δεν πρέπει να επιτρέπεται στην άτομα αυτά να αρχικούνται με το φορτιστή.

Το προϊόν έχει ένδειξη CE αποδεικνύοντας τη συμμόρφωσή του με όλες τις σχετικές οδηγίες της ΕΕ.

C-251HV: 2006/95/EC 2004/108/EC

C-251LV: 2004/108/EC 2006/28/EC

Η εταιρεία Wolf Safety Lamp Co. Ltd λειτουργεί με βάση μια πολιτική συνεχούς βελτίωσης των προϊόντων της. Άλλαγες στη σχεδίαση μπορούν να πραγματοποιηθούν χωρίς προειδοποίηση.

El Cargador Wolfite C-251HV/C-251LV Instrucciones de funcionamiento y mantenimiento

E

La batería se carga **con el cuerpo de la linterna**. Los indicadores muestran el estado de carga de la batería. Si está en rojo solamente, indica que la linterna no ha hecho contacto y se ha de empujar la linterna de manera firme hasta que encaje en la posición. El verde indica carga principal. Verde y rojo indican que la carga está completa. (Durante la carga principal y la carga completa se puede ver la intermitencia de los indicadores.)

La lámpara se puede activar mientras se carga, la lámpara no se encenderá, pero se pone en modo de espera de fallo de alimentación y se encenderá automáticamente en caso de que se corte la alimentación al cargador.

Cargadores de linterna

Hay disponibles dos cargadores para la linterna frontal: ALTA TENSIÓN y BAJA TENSIÓN, para adaptarse a los usos móviles o fijos. Los cargadores con el símbolo "CE" cumplen las Directivas de Baja tensión y de Compatibilidad Electromagnética, además de la Directiva de automoción para equipos para su uso en vehículos de emergencia.

El cargador Wolfite C-251HV es para voltajes de alimentación de corriente alterna de 200 a 240 voltios a 50 o 60 hercios (Los voltajes de las plataformas en mar son de 254 voltios a 60 hercios), que el usuario puede comutar a 100 - 120 voltios a 50 - 60 hercios. En caso de no seleccionar el voltaje correcto puede causar daños.

El cargador alcanza el noventa por ciento de la carga en 6 a 7 horas. Solo acepta el fusible especificado por el fabricante. Los cargadores vienen equipados con clavijas aprobadas; consulte los textos de venta para más detalles.

El Cargador Wolfite C-251LV es apropiado para el uso con Fuentes de corriente continua de 12 a 32 voltios. Una recarga completa de una fuente de 12 voltios tarda entre 20 y 24 horas; de una fuente de 24 voltios, la carga completa se logra en unas 10 o 12 horas. El cable bifilar es de color rojo: positivo y rojo con el trazador negro/negativo.

Recarga continuada en standby a largo plazo

Durante la carga continuada, deberá realizar una inspección "detallada" de la lámpara cada 12 meses, de conformidad con la norma IEC 60079-17. Deberá prestar especial atención a los indicadores de corrosión del terminal y las gotas de ácido resultantes que podrían aparecer al cabo de entre 3 y 5 años en standby. Debe sustituirse la batería de acuerdo con estas instrucciones. Un régimen de alternancia en la conexión puede prolongar la vida de la batería hasta 10 años. El ciclo sugerido es el siguiente: 2 semanas ENCENDIDO, 2 y 3 meses APAGADO, etc. La autodescarga durante el período de APAGADO de entre 2 y 3 meses no será significativa. Los dos cargadores son completamente automáticos, cambiando a un correo de carga de seguridad una vez se ha alcanzado la carga principal.

Se debe cargar inmediatamente la batería que esté completamente descargada para evitar que se dañe; los contactos del cargador son de bajo voltaje y están protegidos contra cortocircuitos; La batería es de acido plomo sellada 4 voltios 5 amperios hora; Rango de temperaturas de funcionamiento del cargador: entre +10°C y +25°C, IP20 - Uso exclusivo para interiores.

ADVERTENCIA: LOS CARGADORES WOLFLITE ESTÁN DISEÑADOS PARA CARGAR SOLAMENTE LAS LINTERNAS WOLF - NO SE DEBE UTILIZAR NINGÚN OTRO APARATO QUE FUNCIONE CON BATERÍAS O BATERÍAS.

La carga deberá realizarse únicamente en lugares bien ventilados. No obstruya ni cubra el cargador. El cargador puede usarse sin fijación o montado en la pared usando los cuatro orificios de montaje. El cable eléctrico tan sólo puede ser sustituido por un agente/distribuidor autorizado.

El cargador no debe ser utilizado por personas (incluidos niños) con capacidades físicas, sensoriales o mentales reducidas, o que carezcan de experiencia o de los conocimientos necesarios. Deberá evitarse que estas personas manipulen el cargador.

El producto está marcado CE para indicar que cumple con todas las directivas de la Comunidad Europea relevantes.

C-251HV: 2006/95/EC 2004/108/EC

C-251LV: 2004/108/EC 2006/28/EC

Wolf Safety Lamp Co. Ltd tiene una política de mejora de producto continua. Puede que se hagan cambios en los detalles de diseño sin previo aviso.
